In regard to a variable quantity, it is taken to mean as qualified - that is, its value is subject to a continual change, either increasing or decreasing. Now this being the case, it is evident that its value must have some rate of increase or decrease, uniform or variable, according to governing conditions. Upon this theory this work is founded, and it is hoped it so clears the way that it can be understandingly followed by those who are so inclined. How is it in regard to a differential, so called, and the process of finding it? First an increment is added to the variable, and finally, in order to obtain what is sought, this increment is made equal to zero and to something at the same time - the something being taken as the differential of the variable. No wonder the student becomes nonplussed, for it is very difficult to conceive how even an infinitesimal, or the last assignable value of a quantity and zero can be identical. Being confronted by such a dilemma, he either has to accept the doctor s diagnosis or give the matter up in disgust.
