Excerpt: .half-inches on it, because we have to show five yards. Divide the first into three parts: it shows feet. Number and complete as in the figure. Note.--The dotted lines shown in the figures are the lines of construction for dividing a line by similar triangles, as explained in Part I. il. Examples of other scales similar to those explained f Inch. Note.--The scale is broken off here, as there is no room to show the next foot, etc. e. The line A B represents one foot nine inches; produce it to show four feet three inches. The first conside ration is, how much of the line A B represents one foot, if A B represents one foot nine inches--that is, twentyone inches. If A B is divided into seven equal parts, then each part represents three inches, and four such parts twelve inches or one foot. Complete the scale as shown in the figure. 2. Diagonal Scales. a. The line A B represents 500 miles. Show hy diagonal divisions how to measure miles. Divide AB into five equal parts. Each part then represents one hundred miles. Divide the first of these divisions on the left hand into ten equal parts, and draw ten parallel lines helow A B, and equidistant from it and from each other. Complete the scale, and number it as in the figure. It is evident that each of the divisions in A C represents ten miles, because A C represents 100...
